

Vulnerability Assessment

Identify | Assess | Reduce IT Risks

**Attackers are testing your security daily.
Are you as focused on your security as they are?**

Technology is dynamic. So is risk. Security gaps are continually evolving and shifting. The challenge is finding these security gaps before attackers can exploit them.

A vulnerability assessment is the process of identifying, quantifying, and prioritizing the vulnerabilities in a system. Organizations that use them know they are at risk and want help identifying and prioritizing them.

Visibility Translates Into Action

You can't manage what you don't know. Knowing where your security gaps are and what is at risk gives you the insights you need to create a remediation plan.

The Assessment is Critical for Managing Vulnerabilities on an Ongoing Basis

An assessment is a first step. Since technology, processes and policies change, assessments should be scheduled on a regular basis.

- ✓ **Comprehensive | All assets both internal and external**
- ✓ **Identify and Prioritize Vulnerabilities – business critical or sensitive**
- ✓ **One time or scheduled**
- ✓ **Meet security best practices and frequency regulatory requirements**
- ✓ **Executive Summary | Detailed Reporting with Recommendations**

Remove the guesswork | Implement *BEST PRACTICES* with ease and certainty!
